

# Existing Customers & Success Story

## Managed Wi-Fi (Bring-Your-Own-Device BYOD) + IP CCTV

### Customer pain point

- ▶ KVERT successfully subscribe for high internet fiber (Unifi) but the internet coverage are limited and wifi is unmanaged with limited connectivity and a lot of intermittent connection
- ▶ KVERTs can't control wifi connectivity for over than 600 number of students
- ▶ KVERTs need to provide wifi connectivity not only for students but also for teachers and other school staff
- ▶ Staff and student are located in various building block and teachers resident
- ▶ Limited finance budget. KVERTS only willing to pay BYOD services fees every semester

### Solutions

- ▶ To fully optimized existing KVERTs TM unifi fiber network connections
- ▶ Extend coverage and maintain KV WIFI under BYOD concept
- ▶ Firewall management by group bandwidth segregation and aggregations (student, teachers and staff)
- ▶ Merging managed WiFi with IP CCTV for long distance building monitoring/ surveillance with remote monitoring and support services
- ▶ Allowed KVERTs to pay the BYOD services and managed wifi by semester
